                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                õ
                                                                             (http://www.jax.org/resources/documents/dnares/). The DNA was Mydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of PMD42 (gil4732114)pblAR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1;

/note="Vector: Bluescript SK-; Site_1: EcoRI; Site_2: XhoI
; Sporozoites were obtained from in vitro sporulated and
excysted ocysts of E.tenella grown in chickens. CDNA was
synthesized from poly mRNA using an oligo-dT primer
containing a XhoI site. Following second strand synthesis,
EcoNI adapters were ligated to the cDNA and products were
slace-selected on sephacryl S500. The cDNA were ligated to
EcoNI/XhoI prepared lambda Zapii (Stratagene). Clones were
converted to phagemids by mass excision using ExAssist
helper phage and E.coli Solx cell (Stratagene). Clones
were selected by negative hybridization against a pool of
overrepresented ESTS (N>-10, from 1682 previous reads).
Insert sizes range from 1.2-2.9Kb. The library may contain
a small percentage of host or bacterial contaminents.

Ocoysts, purified by column chromatography and mRNA extracted using a FASTRACK kit (Invitrogen) cDNA was synthesised and a Uni-ZAP XR library was constructed. using cDNA synthesis kit, ZAP-cDNA synthesis kit and ZAP-cDNA Gapack III Gold cloning kit (Stratagene). The library was amplified once through E. coli XIJ-Blue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative

of pWD42 (gi|4732114|gb|AFI29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (stratagene) cells and selected for amplialin resistance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Plants were raised from seeds in a Controlled Environments Plants were raised from seeds in a Controlled Environments growth chamber maintained in continuous light at 180c, and testa and pericarp were dissected from developing kernels at Washington State University, Pullman, WA (Kannangara, von Wetstein). Total RNA was prepared, poly(A) RNA was purified, one cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids in the TJ Close lab at the University of California, Riverside (Akhnov, Chin, Chol, Close, Fenton, Chin, Chol, Chol,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   picked at the Clemson University Genomics Institute (CUGI)

```
0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oilgonicleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 K range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of PWD42 (gil4732114|gb|AF129072.1); a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ij

```
might not be treated separately due to cost and avoids the use of infectious agents or environmentally harmful materials. By HRE treatment enhanced plant growth is achieved which includes greater yield, increased quantity of seeds produced, increased percentage of seeds germinated, increased plant size, greater blomass, more and bigger fruits, etc. which results in economic benefit to cultivators. Greater
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        understanding the harpin (Erwinia amylovora hypersensitive response elicitor) induced signal transduction pathway in plants. The protein is useful for studying the downstream components of signal transduction pathway in plants which eventually leads to disease resistance, growth enhancement, insect control and stress resistance. Imparting disease resistance to plants through HRE treatment has the potential to treat previously untreatable diseases, treating diseases systemically which
                                                                                                                                                                                                                                                                                                                                                                    (HRE). The plants are made resistant to infection by viruses, bacteria and fungi and are imparted with resistance against environmental stress and insects through HRE treatment. The protein is useful for
                                                                                                                                                                                                                                                                                                                                         receptor in plants for plant pathogen hypersensitive response elicitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    generation from the given plot of plant. The present sequence is
Xanthomonas campestris pv. pelargonii hypersensitive response elicitor
isolated from plants, which upon silencing is used to study plant signal transduction pathways leading to disease resistance and growth enhancement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MDSIGNNFSNIGNLØTMGIGPQQHEDSSQQSPSAGSEQQLDQLLAMFIMMMLQQSQGSDA 60

```
polypeptide or protein in a non-infectious form to a plant or plants comprises: (a) applying a HRE polypeptide or protein in a non-infectious form to a plant or plant seed under conditions effective to enhance growth of the plant or plants grown from the seed, or (b) providing a transgenic plant or plant seed transformed with a DNA molecule encoding a HRE polypeptide or protein, and growing the transgenic plant or produced from the transgenic seed under conditions effective to produced from the transgenic seed under conditions effective to enhance plant growth. HRES (see AAW62454 59) or nucleic acids encoding them (see AAV39972-75) can be used to increase plant growth. The HRES may also result in increased plant height and yield, and effect early germination and maturation of plant seed and early colouration of fruit and plants.

The invention relates to methods of imparting hypersensitive response induced resistance to plants by treatment of seeds. Isolated HRE proteins can be applied to seeds as a

                                   This is the amino acid sequence of a hypersensitive response elicitor (HRE) of Pseudomonas solanacearum. The invention relates to the use of a HRE polypeptide or protein to control insects on plants or plants grown from seed treated with HRE. Also claimed is a method of insect control for plants that involves: (a) providing a transgenic plant or seed transformed with a DNA molecule (see AAV34606-09) encoding a HRE polypeptide or protein (see plants produced from the transgenic plants or transgenic plants produced from the transgenic seeds to control insects. HRE prevents direct insect damage to plants by feeding njury. It kills insects close to plants, and interferes with insect larval feeding on such plants. It also prevents insects from colonising host plants and releasing phytotoxins which result in disease damage to

The specification also describes
means of imparting pathogen resistance to plants grown from the seeds. Alternatively, bacteria containing the gene encoding the HRE can be applied to the plant seeds, or transgenic plant seeds containing a DNA molecule encoding an HRE polypeptide or protein are used. HRE polypeptide sequences from Erwinia chrysanthemi, Erwinia amylovora, Pseudomonas syringae, Pseudomonas campestris prathomonas campestris pelargonii (see AAWGIII3-18) are provided. The methods can impart pathogen resistance without using agents which are harmful to the maniforment or pathogenic to the plant seed being treated, or to
                                                                                                                                                                                                                                                                        44;

The present sequence is a hypersensitive response elicitor protein from Pseudomonas solanacearum. The protein is used to impart stress resistance to plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Application of a hypersensitive response elicitor protein to plants to

           The protein, in non-infectious form, is applied to plants to impart disease resistance (to a wide range of viral, bacterial and fungal pathogens), to improve growth (yield, quantity and quality of seeds, to provide earlier germination etc.) and to control insects (e.g. coborers, Lepidoptera larvae etc.) The same results are provided by transgenic plants expressing the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hypersensitive response elicitor; environmental stress resistance; plant.

                                                                       The present sequence represents a hypersensitive response elicitor polypeptide. The specification describes hypersensitive response elicitor polypeptide fragments, which do not elicit a hypersensitive response. Instead, the proteins impart disease resistance to plants, enhance plant growth, and/or control insects. The polypeptide fragments may be used to these properties to plants. The plants which may be treated in this way include vegetables, crops and ornamental plants such as alfalfa, rice, wheat, barley, rye, cotton, sunflower, petado, sweet potato, bean, pea, chicory, lettuce, endive, cabbage, brussel sprout, beet, parship, turnip, cauliflower, broccoll, radish, spinach, onton, garlic, eggplant, pepper, celery, carrent, squash, pumpkin, zucchini, cucumber, apple, pear, melon,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          response to infection of the plant by an oomycete. The chimeric gene is used in gene therapy. The chimeric gene is useful as an effective and safe means of controlling plant-pathogenic fungi, particularly comycetes, which are responsible for major crop loss and is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for producing transgenic plants of the invention. The present sequence is Pseudomonas solanacearum hypersensitive response elicitor protein.
                                                                                            58 saggntgntgnapakdgnanagandpskndpsksqapqsanktgnvddannqdpmqalmq 117
                                                                                                                                                                molecule encoding a hypersensitive response elicitor protein or polypeptide, promoter operably linked 5' to the first DNA molecule to induce transcription of the first DNA molecule in response to activation of the promoter by an oomycete and a 3' regulatory region operably linked to the first DNA molecule. The invention also relates to a transgenic plant resistant to disease resulting from comycete infection, the transgenic plant including the chimeric gene, wherein the promoter induces transcription of the first DNA molecule in

The 4KD protein encoded by the hrpw gene is a hypersensitive response elicitor protein. The harpin is thought to be an archetype for HR elicitors from phytopathogenic

This is the amino acid sequence of a 39 kDa, heat stable
hypersensitive response elicitor (HRE) of Erwinia amylovora. The
invention relates to the use of a HRE polypeptide or protein to
control insects on plants or plants grown from seed treated with HRE.
Also claimed is a method of insect control for plants that involves:
(a) providing a transgenic plant or seed transformed with a DNA
concenie (see AAV54606-09) encoding a HRE polypeptide or protein (see
AAW75862-67); and (b) growing the transgenic plants or transgenic
plants produced from the transgenic seeds to control insects.
Prevents direct insect damage to plants by feeding nigury. It kills
on such plants. It also prevents insects from colonising host
colonisms and releasing phytotoxins which result in disease damage to

enhance plant growth. HRES (see AAW62454-59) or nucleic acids encoding them (see AAV39972-75) can be used to increase plant growth. The HRES may also result in increased plant height and yield, and effect early germination and maturation of plant seed and early colouration of fruit and plants. E. amylovora HRE can be applied to tomato plants to enhance growth without causing disease in that species; this, bacterium is a pathogen of apple and pear but not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GSDANQ--ECGNEQPQNGQQ----EGLSPLTQMLMQIVMQLMQNQGGAGMGGGGSVNSSL 110

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the deduced amino acid sequence of the 39 kDa, heat stable hypersensitive response elicitor (HRE) of Erwinia amylovora. A method of enhancing growth in plants comprises: (a) applying a HRE polypeptide or protein in a non-infectious form to a plant or plants grown from the seed, or (b) providing a transgenic plant or plants grown from the seed, or (b) providing a transgenic plant or plant seed transformed with a DNA molecule encoding a HRE plant or polypeptide or protein, and growing the transgenic plant or produced from the transgenic seed under conditions effective to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GNNFSNIGNL---QTMGI-GPQQHEDSSQQSPS-AGSEQQLDQLLAMFIMMMLQQS---Q 56

It is heat stable at 100 degc for at least 10 min, has a pl of approximately 4.3, and contains substantially no cysteine. The invention relates to methods of imparting the proteins resistance to plants by treatment of seeds. Isolated HRE proteins can be applied to seeds as a means of imparting pathogen resistance to plants grown from the seeds. Alternatively, bacteria containing the gene encoding the HRE can be applied to the plant seeds, or transgenic plant seeds containing a NAM molecule encoding an HRE polypeptide or protein are used. HRE polypeptide sequences from Erwinia chrysanthemi, Erwinia amylovora, Pseudomonas syringae, Pseudomonas solanacearum, Xanthomonas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         campestris pv. glycines and Xanthomonas campestris pelargonii (see

```
The present sequence represents a hypersensitive response elicitor protein (also called hairpin protein) that is able to elicit a hypersensitive response in plants. The specification also describes hypersensitive response elicitors from other pathogenic organisms. The protein, in non-infectious form, is applied to plants to impart disease resistance (to a wide range of viral, bacterial and fungal pathogens), to improve growth (yield, quantity and quality of seeds, to provide earlier germination etc.) and to control insects (e.g. corn borers, Lepidoptera larvae etc.) The same results are provided by transgenic plants expressing the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New fragments of an Erwinia hypersensitive response elicitor protein and related DNA - used to impart disease resistance to plants, to increase their growth and to control insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5 GNNFSNIGNL---QTMGI-GPQQHEDSSQQSPS-AGSEQQLDQLLAMFIMMMLQQS---Q 56

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Alegar, M.

mitted to the Protein Sequence Database, March 1994

Macsasion: 537334

Accession: 537349

Molecule type: DNA

Residues: 1.597 CRIES

Cross-reference: EMB::228032; NID::9486033; PIDN:CAA81867.1; PID::9486034; GSPDB:GN0001

Experimental source: strain 5288C

Experimentals ource: strain 5288C

Experimentals ource: strain 5288C

OM protein - protein search, using sw model

Run on:

June 28, 2002, 10:19:58; Search time 12.31 Seconds (without alignments)
358.573 Million cell updates/sec

Title: Perfect score: Sequence:

US-09-829-124-2 584 1 MDSIGNNFSNIGNLOTMGIG........OGGAGMGGGGSVNSSLGGNA 114

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Total number of hits satisfying chosen parameters: 105224 seqs, 38719550 residues Searched:

105224

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 45 summaries

SwissProt_40:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Act as a specific hypersensitive response (HR) elicitor.
Has activity on tobacco (non-host plant) and petunia but is
without activity on tomato (host plant).
--- SUBCELLULAR LOCATION: Secreted.
--- PTM: POPAZ and popA3 are produced from popA1 by stepwise removal
Arlat M., Van Gijsegem F., Huet J.-C., Pernollet J.-C., Boucher C.A., "Poph, a protein Which induces a hypersensitivity-like response on specific Petunia genotypes, is secreted via the Hrp pathway of Pseudomonas solanacearum.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Genome sequence of the plant pathogen Ralstonia solanacearum.";
Submitted (DEC-2001) to the EMBL/GenBank/DDBJ databases.
